

AutoStore Bins are designed and approved for use in the modular and stackable AutoStore system.

AS12522

AS12523

AS15346

Different Sizes & Materials

Bins are available in three different heights and three different materials: HDPE (standard), PP-ESD (anti-static applications) and PP (for overseas shipping). To accommodate multiple product categories inside one Bin, optional dividers enable a single Bin to be separated into different compartments.

Strong & Durable

Bins are stackable up to 5.7 meters in height (17 Bin stack for 330mm and 25 Bin stack for 220mm), and they are engineered to withstand years of service with hundreds of thousands of movements. Each Bin is 100% compatible with all other AutoStore modules past and present.
